CUMULATIVE PERFORMANCE

FUND SENSITIVITY TO EQUITY MARKET

COMMENTARY

The FTSE/JSE All Share Index gained 3.0% in December, the BESA All Bond Index 1.1% and the MSCI World Index 4.1%, aided by the 2.0% depreciation of the rand relative to the US dollar. The gold price fell by 3.8% over the month. Global stock markets ended 2013 at new highs as the US Federal Reserve's tapering announcement was heavily sweetened by the promise of lower interest rates for longer, while a weary US Senate signed off on a budget deal without protracted negotiations. Emerging markets came under pressure as both Turkey and Egypt contributed to the political noise. The rand bore the brunt of the sell-off despite credit rating agencies re-affirming South Africa's rating.

The US Fed announced it would cut its monetary easing programme in January 2014 to US\$75 billion a month, while undertaking to maintain interest rates at record lows well beyond when unemployment reduces to 6.5% and bond purchases end. The US Fed is expected to reduce its bond purchases in US\$10 billion increments over the next seven meetings. After an initial negative reaction, markets picked up again as investors digested the news and judged it to be less impactful than expected.

The gold price tumbled in response, bringing to a close the worst year for the metal in 32 years, with the price down 28% in 2013, and 37% below a record high of US\$1 920 achieved in 2011. The oil price ended the year at US\$112 a barrel, supported by escalating unrest in South Sudan and Libya.

The rand lost 23.2% against the US dollar and 30.4% against the euro over 2013. General negative sentiment towards emerging markets was compounded by domestic strikes in the mining and manufacturing sectors. December brought further bad news in the form of a widening current account deficit figure for the third quarter.

After all the numbers have been tallied, the 2013 winner is Japan. The Nikkei 225 index rallied 56.7% over 2013, its biggest annual gain since 1972. Shares were bolstered by a weaker yen and hopes for Prime Minister Shinzo Abe's monetary policies. China has the honour of having the worst -performing stock market of the major economies, with the benchmark Shanghai Composite Index down 7.6% from a year earlier as disillusioned investors moved their assets into cash and property. The S&P 500 was up 29.6% in 2013, its best performance since 1997, the FTSE100 14.4%, Germany's DAX 22.8%, Australia's S&P/ASX 200 14.8% and South Africa's ALSI 21.4%.

DISCLAIMER: Sygnia Collective Investments (RF) Proprietary Limited ("the Company") is a member of the Association for Savings & Investment SA (ASISA). Sygnia Asset Management (Proprietary) Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price. A schedule of fees, charges and maximum commissions is available on request from the Company. Commission and incentives may be paid and if so, would be included in the overall costs. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and the Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future.
