CUMULATIVE PERFORMANCE

FUND SENSITIVITY TO EQUITY MARKET

COMMENTARY

2014 started on a negative note as data releases pointed to a slowdown in manufacturing activity in China and the US. Although China's GDP growth for 2013 came in at 7.7%, the Chinese economy has shown strong signs of slowing down.

As attention turned away from quantitative easing to economics, investors' moods brightened. The US continued its recovery, with the unemployment rate falling to 6.7%, stronger retail sales and improving home prices. In Europe manufacturing activity is trending upwards, driven largely by Germany. And in Japan inflation rose to 1.2% in November, the fastest pace since 2008.

The second half of January was less rosy, with most emerging markets coming under tremendous selling pressure as investors digested the implications of the wind-down in US monetary stimulus. A subdued corporate earnings season in the US and concerns about China's growth numbers did not help sentiment.

As the flight from emerging markets gathered momentum, currencies in Turkey, Argentina, South Africa and Russia hit record lows in a sign of global contagion. Turkey, India and South Africa responded by raising interest rates.

The move proved inconsequential as emerging markets slumped further after the US Fed announced that it would trim its bond purchases by a further US\$10 billion a month to US\$65 billion from February. The sell-off provided a badly needed boost to gold, which traded at its highest levels in two months.

In South Africa the rand continued to extend its slide against major currencies in January, breaking through the R/US\$11.20 level for the first time in five years and increasing the likelihood of a breach in the upper inflation target and the probability of a series of interest rate hikes in 2014. And although inflation came in at a benign 5.4% year-on-year in December, it is expected to breach the 6.0% level in the second quarter of 2014. The broad weakness in the equity market was masked by a surge in resources and rand hedge stocks in response to the weaker rand.

Annual growth in 2013 is estimated to have been around 1.9%. The SARB's forecasts for growth in 2014 and 2015 have been revised down to 2.8% and 3.3% respectively. The FTSE/JSE All Share Index fell by 2.4%, the BESA All Bond Index by 3.2% and the rand relative to the US dollar by 6.8%. Resource shares saved the day with the sector delivering a 5.7% return.

DISCLAIMER: Sygnia Collective Investments (RF) Proprietary Limited ("the Company") is a member of the Association for Savings & Investment SA (ASISA). Sygnia Asset Management (Proprietary) Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price. A schedule of fees, charges and maximum commissions is available on request from the Company. Commission and incentives may be paid and if so, would be included in the overall costs. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and the Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future.
