COMMENTARY

September brought to an end the worst quarter for global equities in the past six years. The combination of the Greek crisis, the Chinese stock market gyrations, its currency devaluation strategy and continuing economic slowdown, compounded by the uncertainty over the timing of US Federal Reserve's interest rate increases, has created a toxic mixture which has punished commodity prices, stocks and, in particular, emerging markets and their currencies. The Volkswagen emission test scandal and the continuing stream of weak economic data from China contributed to the negative sentiment throughout the month.

The US Federal Reserve described the US economy as continuing to grow modestly, despite unemployment falling to 5.1%, a level regarded as close to "full employment". In the migrant-swamped Europe the ECB cut its 2015 growth and inflation forecasts for the eurozone to 1.4% and 0.1% respectively and kept interest rates unchanged as deflation risk reared its head again.

The equity markets swung up and down on concern about the direction of US interest rates. The flight to safety of US Treasuries translated into a stronger US dollar, with the rand touching the R14.01/US\$ level. Commodity producers were badly hit as wave after wave of poor Chinese data hit the wires.

Concerns about South Africa's credit rating came into the spotlight after S&P downgraded Brazil's debt to a sub-investment grade status. The economy continued on a weak path with slowing manufacturing activity and plummeting business confidence. On a positive note consumer inflation slowed to 4.6% year-on-year in August on the back of lower fuel prices. The Reserve Bank left interest rates unchanged but downgraded economic growth prospects to 1.5% and 1.6% in 2015 and 2016 respectively. We expect the volatility to continue until such time as the US Federal Reserve increases interest rates, allowing speculation to settle. A negative sentiment towards emerging markets will continue until such time as China's economy shows signs of stabilising, punishing the rand and the South African equity market.

The All Share index returned 1.0%, boosted by SABMiller which is subject to a hostile take-over bid by its largest competitor. The SWIX index, with its lower exposure to SABMiller, returned -1.0%. The Resources sector fell by a massive 9.6%. The All Bond Composite fell by 0.1%, while the Listed Property sector returned 0.8%. The Rand weakened by 4.2% against the US dollar

The Fund may be closed to new investments at any time in order to be managed in accordance with its mandate. Sygnia Collective Investments (RF) Proprietary Limited ("the Company") is a member of the Association for Savings and Investment SA (ASISA). Sygnia Asset Management (Proprietary) Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is registered under the Collective Investment Schemes Control Act, 2002 (Act No 45 of 2002). The Company does not provide any guarantee with respect to the capital or return of the portfolio. Nothing in this document will be considered to state or imply that the collective investment scheme or portfolio is suitable for a particular type of investor. All figures used are merely for illustrative purposes only.

UNIT PRICES

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price.

Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending to bridge insufficient liquidity. Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily an indicator of future performance.

FEES

The annual management fee comprises applicable basic fees paid to underlying managers, Sygnia's annual service fee and advice fees payable to financial advisors (where applicable). Any balance remaining after payment of these amounts is rebated back to the Fund.

A schedule of fees, charges and maximum commissions is available on request from the Company. Commission and incentives may be paid and if so, would be included in the overall costs. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees.

Initial and ongoing advice fees may be facilitated on agreement between the Client and Financial Advisor. The payment of these fees is facilitated by the LISP and not directly by Sygnia.

Performance based fees are calculated in terms of the supplemental deed for certain of our asset managers where they outperform the Fund's stated benchmark. This performance fee will be paid by the Fund to the underlying investment manager and only when the Fund's performance exceeds that of the benchmark.

TER

The TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER includes the annual management fees (both basic and performance fees), VAT and other expenses. The TER does not include transaction costs. Since unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER ratio does not necessarily imply a poor return nor does a low TER imply a good return. The current disclosed TER cannot be regarded as an indication of future TER's. Instead, when investing, the investment objective of the Fund should be consistent with the investor's objective and the performance of the Fund should be compared to that objective. TERs should then be used to evaluate whether the Fund 's performance offers value for money. Initial and ongoing advice fees may be facilitated on agreement between the Client and Financial Advisor.

PERFORMANCE

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily an indicator of future performance.

INVESTMENT POLICY

The Sygnia CPI + 2% Fund is a multi-asset class fund managed with a low exposure to equities in order to seek a low volatility of returns while still seeking to achieve long term returns of at least 2% per annum above inflation. The fund will have exposure to both domestic and foreign assets, which will include equities, fixed interest and money market assets and the fund will comprise a number of underlying portfolios managed by a range of different managers selected by Sygnia. The fund has a benchmark of CPI + 2% per annum and will maintain a total equity exposure of below 40% of the portfolio.
