CUMULATIVE PERFORMANCE GRAPH

FUND SENSITIVITY TO EQUITY MARKET

This scatter plot indicates the sensitivity of the fund returns to those of the equity market. This analysis shows that the

COMMENTARY

The dramatic EU summit announcement that European banks would receive aid directly from the region's permanent bail-out fund, the ESM, quickly ran into trouble as a number of EU countries, including Finland, the Netherlands and Germany, seemed to hesitate over the decision. Once again, economic data disappointed with Q2 GDP growth in the US and China slowing down to 1.5% and 7.6% respectively, after 2.0% and 8.1% gains in Q1. Across the Atlantic, the eurozone remained mired in recession.

As markets wobbled, global central banks went on the offensive. The ECB, Denmark and China cut interest rates, while the Bank of England raised the size of its asset-purchase programme by £50 billion to £375 billion.

This did little to ease concerns as Spanish and Italian borrowing costs soared back into the danger zone. Spain, Italy and Greece all announced further austerity measures, while Greece asked its lenders for a three-year extension to its bail-out programme till 2017.

With markets poised to fall sharply, Germany and Finland saved the day by endorsing the decision to use the eurozone's rescue fund to help Spanish banks.

And the ECB's President, Mario Draghi, announced that the central bank "would do whatever it takes to protect the euro", a message echoed by Germany and France. The comments stoked optimism that the ECB and the US Fed will provide further stimulus measures.

According to the South African Reserve Bank's 2012 annual economic report, growth remains "pedestrian", with the manufacturing sector vulnerable because of the European crisis. After nine MPC meetings with no changes, the SARB cut the repo rate by 50 basis points to 5.0%, taking the prime rate to 8.5%. The CPI came in at 5.5% year-on-year in June, while the PPI remained unchanged at 6.6%.

On the political front, credit ratings agencies expressed disappointment over the failure of the ANC Policy Conference in June to clarify its approach to the nationalisation of mines.

The equity market roared ahead, with the FTSE/JSE All Share Index gaining 2.7% despite the Resources sector giving up 2% in performance. The bond market continued to benefit from foreign buying, rising 4.0%, while the Rand weakened by 1.5% against the US dollar.

Disclaimer: Sygnia Collective Investments (RF) Proprietary Limited ("the Company") is a member of the Association for Savings & Investment SA (ASISA). Sygnia Asset Management (Proprietary) Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price. A schedule of fees, charges and maximum commissions is available on request from the Company. Commission and incentives may be paid and if so, would be included in the overall costs. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and the Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future.
