CUMULATIVE PERFORMANCE

FUND SENSITIVITY TO EQUITY MARKET

COMMENTARY

The volatility in the markets continued through November as the eurozone moved deeper into a recession, looming fiscal cliff concerns overshadowed the re-election of US President Barack Obama, and wrangling over Greece highlighted deep divisions over how to handle the eurozone crisis. A once-in-a-decade political transition in China, a military stand-off between Israel and Palestine and a spate of sovereign downgrades added to the market uncertainty. Undoubtedly, the US is well ahead of others on the road to economic recovery, a fact attributable to the ultra-aggressive monetary policies implemented by the Federal Reserve. China has also stabilised, albeit at low levels, but the eurozone remains mired in a recession.

All the attention focused on the US “fiscal cliff” issue, a series of automatic tax increases and spending cuts amounting to US\$607 billion effective on 1 January 2013 which could reduce US growth by around 3% in 2013. Negotiations between the Republicans and Democrats have yielded little to date. The news that the eurozone has slipped back into a recession, with the third quarter GDP contracting by 0.1% quarter-on-quarter, triggered a heavy mid-month sell-off. Greece was granted two more years till 2022 to reduce its deficit, while Spain successfully raised €4.8 billion through a bond auction, giving it more time before having to

Moody's lowered France's sovereign rating from AAA to Aa1 on the back of concerns about France's long-term growth outlook. Month-end brought some upward momentum to the markets on the back of stronger November manufacturing surveys in the US and China, and indications of some progress in the fiscal cliff negotiations.

In South Africa the effects of the mining and transport strikes in September came through in the economic data at the same time as the strikes spread to the farm workers in the Western Cape and the rand flirted with the R9/US\$1 level. The most significant effect has been the lower than expected third quarter GDP growth figure which came in at 1.2% on a seasonally adjusted and annualised basis. Unemployment rose to 25.5% in the third quarter, with the number of unemployed people reaching 4.7 million, the most since 2008. Consumer inflation rose to 5.6% year-on-year and the trade account deficit widened to its worst level in years in October. The FTSE/JSE All Share Index closed the month at a fresh all-time high after weak trade figures pushed the rand lower with the rand-hedge stocks gaining. Overall equities returned 1.6%, the BESA All Bond Index rose by 0.8% and the rand depreciated by 2.6% against the US dollar.

DISCLAIMER: Sygnia Collective Investments (RF) Proprietary Limited (“the Company”) is a member of the Association for Savings & Investment SA (ASISA). Sygnia Asset Management (Proprietary) Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price. A schedule of fees, charges and maximum commissions is available on request from the Company. Commission and incentives may be paid and if so, would be included in the overall costs. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and the Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future.
