

STRATEGY OBJECTIVE

The objective of this strategy is to target an annual return of LIBOR (USD 3 months) plus 4% over a rolling 60-month period and not to lose capital over a rolling 24-month period in USD terms.

LAUNCH DATE

31 May 2005

TOTAL EXPENSE RATIO

2.08%

* includes a rebate to FSP of 0.20% (incl. VAT)

Unit trusts are medium to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accrual and less any permissible deductions from the portfolio. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commission is available from the management company / scheme. Different classes of units apply to this fund and are subject to different fees and charges. Commission and incentives may be paid and if so, would be included in the overall costs. It should also be noted that as a result of the nature of wrap fund portfolios, an investor's underlying portfolio holdings and/or portfolio performance may differ slightly from the information reflected above. Therefore, performance figures presented on the fact sheet are approximate figures and may differ from actual performances of client accounts.

FUND SENSITIVITY TO EQUITY MARKET

This scatter plot indicates the sensitivity of the fund returns to those of the equity market. This analysis shows that the fund exhibits little sensitivity to the direction of the equity market.

COMMENTARY

Touted as a key month for the future of the eurozone, September did not disappoint, bringing more monetary relaxation, but few long-term answers. From chaos in the Middle East triggered by an incendiary anti-Islamic video posted on YouTube, and protests in Spain and Greece, to the crippling mining strikes in South Africa, the month lurched from one surprise to the next. Economic data continued to point to a global slowdown. This pushed oil prices to below US\$110 a barrel despite the instability in the Middle East and the Iran oil sanctions. The gold price rose to above US\$1 780 an ounce, ending the quarter 11.5% up, as investors once again viewed the metal as an inflation hedge.

But economic fundamentals were overshadowed by major policy decisions. The ECB announced that it will launch an unlimited bond-buying programme to lower struggling EU countries' borrowing costs. The German Constitutional Court declared the permanent bailout fund, the European stability mechanism as legal, clearing the way to use it to recapitalise troubled banks and governments.

The US Fed embarked on an unlimited third round of quantitative easing until the labour market outlook improves "substantially". However attention soon shifted to Spain which continued to resist asking for a bail-out. Unfortunately, with unemployment at 24.6%, an unstable banking system and the real prospect of secession of Catalonia, the government has little choice. Asking for a bail-out is a precondition for the ECB buying Spanish bonds to lower its yields.
